Introduction

The tables in this publication supply historical data on production, supply, trade and prices for some of Canada's principal agricultural products. The statistics do not cover all available information on these products but help place the present situation in the proper historical perspective. Many of the figures have been rounded. Prices in most cases are limited to a single market.

Because many of the more recent figures are subject to revision, they have been spaced to allow for changes. Provision has been made for the years up to 1960 so that additional figures may be added as they become available.

Most of the statistics are from published Dominion Bureau of Statistics' sources, except some of the livestock and livestock product figures which are from publications of the Department of Agriculture.

Domestic disappearance of products other than grains does not include non-civilian consumption during the war years 1940 to 1945.

Conventional Signs

Throughout the publication a blank space indicates that statistics are not available, a dash (-) indicates nil and (0) indicates that the figure was less than half the unit shown at the head of the column.

CANADA - Wheat

| Crop year from August 1 | Seeded acreage | Average yield per acre | Pro- duction | Stocks at August 1 | Imports | Total supply |
|-------------------------------|-------------------|------------------------------|-----------------|--------------------------|---------|-----------------|
